

ASSESS

Data Impact Assessment

UNDERSTAND THE RISKS IN THE DATA YOU ARE COLLECTING, STORING & MANAGING

Overview

Your **Data Resilience** journey can't commence until you understand the data that you are collecting, storing and managing, its business criticality and inherent risks.

Far from just a technical assessment, our **Data Impact Assessment** service starts with an understanding of your business goals, services, functions and processes along with the business applications and systems that support them.

Next, we analyse internally generated and externally sourced data, identifying, categorising and risk-assessing your data sources and its Confidentiality, Integrity and Availability.

A key focus is placed on Personal and Sensitive Data being collected and handled and this is assessed against relevant legislative and compliance requirements.

Approach

Depending on individual client requirements, our approach uses a combination of workshops, surveys and software applications to support our **Data Resilience Impact Assessment** services. The output from this service form the basis upon which data strategies, tools and business intelligence can be built and managed.

CUSTOMISED TO SUIT

Our **ASSESS** services can be fully tailored to your **Data Resilience** strategy, internal and external data sources and ultimately, your business analysis requirements.
